

# The 4-Point Belt of Communication: A Manifesto for Locking Humanity Into Understanding

Author: Dirk Van Echelpoel

Date: September 2025

Racing runs on signals. Lights-out. DRS beep. Push-to-pass vibration.

What if human communication could be just as clear?

The 4-Point Belt of Communication (MCP4H) is a protocol built on four modalities: text, audio, visuals, and haptics. Universal. Open. Human-first. Its purpose is to reduce friction in human-to-human communication and extend this clarity into human-machine interactions.

This is not a product pitch. It's a manifesto.

We believe that communication should be as resilient and multimodal as the systems we rely on daily. MCP4H is about clarity, empathy, and universality. A framework where information transcends silos and becomes accessible to all — regardless of ability, platform, or context.

This document is an invitation to collaborate on shaping MCP4H into a standard. The first sandbox for testing: sim racing. A noisy, multimodal environment that mirrors real-world communication challenges, and a proving ground for building something that lasts.
